1. Introduction

The goal of this Map is to identify and map all research and innovation (R&I) (infra)structures and resources available at ERUA member level.

The information presented here represents the first deliverable under Task 1 of Work Package 6 of Re:ERUA (“Sharing infrastructures and resources and developing common structures”). As part of Task 3 (“Particular knowledge and experience sharing infrastructure”) in link with WP2 Del 2.3 (Mapping research portfolios and potential partner organizations across the Alliance) and Del 2.4 (Listing of researchers), this Map will be digitized and made fully searchable and accessible.

Those maps will be used to build a online Research Portal in order to facilitate sharing and collaboration between researchers at all levels across the alliance.

Before that, as part of Task 1 and Task 2 (“Establish processes and connections between resources”) this Map will be circulated among ERUA member institutions for test-driving, update and sharing procedure discussion.

In identifying the R&I structures and resources available at ERUA member we have relied on the following definition of **research infrastructures** provided by the EU Commission (https://ec.europa.eu/info/research-and-innovation/strategy/strategy-2020-2024/our-digital-future/european-research-infrastructures_en):

“Research Infrastructures are facilities that provide resources and services for research communities to conduct research and foster innovation. They can be used beyond research e.g. for education or public services and they may be single-sited, distributed, or virtual. They include:

- *major scientific equipment or sets of instruments*
- *collections, archives or scientific data*
- *computing systems and communication networks*
- *any other research and innovation infrastructure of a unique nature which is open to external users.”*

This Map tabulates R&I structures and resources (R&I units) by listing information (where applicable and available) in the following eight rubrics: **NAME, URL, LOCATION, TYPE, SCIENTIFIC AREA(S), KEY THEMES, EQUIPMENT, DATASETS/SOFTWARE.**

The **NAME** for each entry is the English translation provided by each R&I unit as its name within its corresponding member institution (or where such is lacking, our best effort to render into English the original name used).

The **URL** provided is that of the English version of each R&I unit's website (where available), failing that—the most user-friendly website presenting the R&I unit's work. At NBU there are several cases where a single web address presents multiple R&I units in Bulgarian only—there we have provided the web address in question as well as the R&I unit's Head email address.

LOCATION identifies the ERUA member institution that houses the R&I unit. A geographical location beyond this is indicated only when the R&I unit is well outside the city of the ERUA member.

TYPE classes each R&I unit as either one of seven types respecting R&I units' own nomenclature as far as possible. We have sorted all R&I units into 8 **TYPES** as follows:

- 1 An academic department is labeled here as **Department**.
- 2 **Research centres** are established R&I units, either parallel to **Departments**, or within or between **Departments**. In this Map they include UKON's "Research networks" which are funded through the German Excellence Initiative and serve to initiate and intensify the scientific exchange with external partners.
- 3 **Institutes** are established R&I units parallel to **Departments**, with varying degrees of autonomy. They include UKON's "Associated institutes".
- 4 **Research groups** are more informal or less-long-term R&I units within or between **Departments**. They include UKON's "Research training groups".
- 5 **Labs** are any R&I units that conduct experimental research. They include UKON's "Core Facilities" and NBU's art and multimedia studios. They also include all R&I units labeled as "Lab" or "Laboratory" (εργαστήριο) at UAEG regardless of type of research.
- 6 The **Archive** category includes autonomous R&I units which define themselves primarily as archives. The category does not include R&I units' collections of archival materials, which are listed under the **DATASETS/SOFTWARE** rubric in this map. For the purposes of this Map an Archive is not a database for the work of current researchers at ERUA member institutions which have classed as **PLATFORMS**.
- 7 **Platforms** are electronic platforms for research projects, works in progress and publications by current researchers at ERUA member institutions. UKON's network and computational platforms are also listed here.

In addition the following three **TYPES** are unique to UKON:

Cluster of excellence are major centres for interdisciplinary research funded within the framework of the Excellence Strategy of the German Federal and State Governments.

Collaborative Research Centres are long-term research facilities for interdisciplinary research funded by the German Research Foundation (DFG).

Research units are shorter-term research facilities funded by the German Research Foundation (DFG).

The rubric **SCIENTIFIC AREA(S)** identifies the primary scientific background(s) from which members of R&I units come. These are the traditional major scientific disciplines regardless of interdisciplinarity.

KEY THEMES is the most diverse rubric in our map as it aims to capture the main research topics that R&I units work on. At UP8 they reflect the so-called “Axes de recherche”.

EQUIPMENT lists major equipment at R&I units. In cases, where lists are too long and detailed to include in full, a URL link has been provided.

DATASETS/SOFTWARE includes datasets and software developed by R&I units as well as smaller archival collections.
