

Roland Szuromi

ERUA Student Ambassador

Field of Studies: Biomedical Engineering

Hobbies and interests: I am passionate about physical activity and sports. I am also interested in traveling, experiencing new cultures, and learning about technology, innovation, and medicine.

Motivation to become an ambassador for ERUA:

My main motivation stems from the experience I had during the trip to Lithuania, which was a unique and very enriching opportunity. Thanks to this experience, I was able to improve my soft skills and my English proficiency, as well as participate in a course of interest where we engaged in activities such as 3D design and printing and the experience of being a teacher for a day at a school, among others.

I also had the opportunity to meet people from different countries and universities, discover a new culture, and broaden my international perspective. I would like to share this experience with other students at the ULPGC so they can learn about the opportunities ERUA offers and benefit from similar experiences that contribute to their personal, academic, and professional development.
